HOUSING NOW
Trois-Riviéres CMA

CANADA MORTGAGE AND HOUSING CORPORATION

Date Released: Third Quarter 2015

Highlights

- In June 2015, the trend in housing starts decreased for a sixth consecutive month.
- The mid-year results showed a modest increase in transactions on the resale market.
- Resale market conditions remained balanced in the Trois-Rivières area.

Figure 1

Source: CMHC
*SAAR[1]: Seasonally Adjusted Annual Rate

[1] All starts figures in this release, other than actual starts and the trend estimate, are seasonally adjusted annual rates (SAAR)—that is, monthly figures adjusted to remove normal seasonal variation and multiplied by 12 to reflect annual levels. By removing seasonal ups and downs, seasonal adjustment allows for a comparison from one season to the next and from one month to the next. Reporting monthly figures at annual rates indicates the annual level of starts that would be obtained if the monthly pace were maintained for 12 months. This facilitates comparison of the current pace of activity to annual forecasts as well as to historical annual levels.

New home market

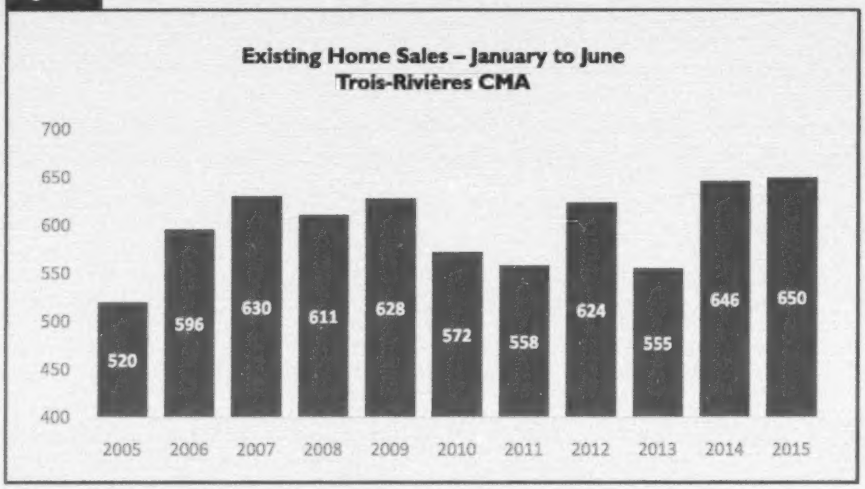
Housing starts in the Trois-Rivières census metropolitan area (CMA) were trending at 372 units in June 2015, compared to 514 in May. The trend is a six-month moving average of the monthly seasonally adjusted annual rates (SAAR) of housing starts.

At mid-year, the trend in housing starts registered a sixth straight monthly decrease in the Trois-Rivières metropolitan area. This decline was mainly due to the significant supply of residential properties on the resale market and the relatively high vacancy rate for rental apartments. With the limited need for new housing, builders have been starting fewer dwellings.

According to the actual data, 192 housing units were started from January to June 2015, for a drop of 54 per cent from the corresponding period in 2014. We forecast that starts will continue to fall over the coming quarters. However, a few condominium projects should get under way shortly, which will limit the decline on the new home market.

None of the market segments were spared from the slowdown in construction. During the first six months of 2015, foundations were laid for 114 freehold homes,[2] down by 32 per cent from the same period in 2014. Rental housing starts, for their part, registered a decrease of 58 per cent, while condominium construction recorded a drop of 88 per cent. It should be noted, though, that activity in this last segment had reached an all-time high in 2014.

Figure 2



Source: QFREB by Centris®

On the geographic front, home construction slowed down in almost all sectors of the metropolitan area, but two sectors did post small gains in housing starts, namely, Pointe-du-Lac and Trois-Rivières-Ouest.

Elsewhere in the Mauricie area, the agglomeration of Shawinigan also registered a decrease in residential construction. During the first six months of 2015, 46 starts were enumerated, down by 37 per cent from the same period in 2014. It should be recalled, however, that the start of 2014 had been particularly active on the new home market in Shawinigan.

Resale market

According to the Quebec Federation of Real Estate Boards (QFREB), Centris® sales of existing residential properties in the Trois-Rivières metropolitan area posted a small increase (+1 per cent) during the first six months of the year over the same period in 2014, reaching 650 transactions. In fact, the strong gains in May and June (+19 per cent and +11 per cent, respectively) offset the slowdown in residential construction observed from January to April 2015 (-5 per cent).

An analysis of sales by housing type revealed mixed results. On the one hand, the 66 condominium transactions registered this year represented an increase of 16 per cent over the same period in 2014.[3] On the other hand, sales recorded a small decrease of 1 per cent for single-family houses and a larger drop of 13 per cent in the case of plexes. Overall, the resale market posted a period comparable to the first half of last year, when transactions had reached a peak. What's more, the improvement of the job market will continue to support activity on the resale market over the next two years.

[2] Freehold homes refer to dwellings where the owner also holds the title of ownership to the land (single-detached, semi-detached and row houses).
[3] Year-to-date: January to June

Supply continued to grow in the first two quarters. In fact, from January to June, active listings rose by 11 per cent over the same period a year earlier. All housing types experienced considerable increases. While supply was up by 10 per cent for single-family houses and plexes, the growth in active listings reached 25 per cent in the case of condominiums.

With supply outpacing demand, conditions eased slightly and ended up on the cusp between a buyer's market and a balanced market. As a result, Centris® prices recorded decreases in all housing categories, falling by 2 per cent for single-family houses, by 3 per cent for plexes and by 5 per cent in the case of condominiums.

Seniors' Housing Report

Provincial survey results

According to the latest survey conducted across Quebec by Canada Mortgage and Housing Corporation (CMHC), the vacancy rate for standard spaces remained relatively stable over the past year. The rate was measured at 7.3 per cent in February, compared to 7.5 per cent at the same time in 2014. The present rate is nonetheless lower than that of two years ago (8.7 per cent in 2013). This stability of the seniors' home market stems from marginal growth in demand and supply.

On the demand side, population growth in the 75 years and over age group was rather weak according to the latest statistics (+3.3 per cent in 2014). This group constitutes the main client base for seniors' homes. Moreover, the share of the population aged 75 years and over living in a residence (known as the capture rate) remained virtually stable this year (18.5 per cent compared to 18.6 per cent in 2014). As for supply of spaces, it increased in similar proportion to demand. The number of spaces was estimated at close to 112,000 last February, an increase of 3.3 per cent compared to the same period in 2014. As a result, these changes in demand and supply kept relatively stable the vacancy rate for standard spaces in seniors' residences.

As was the case for the province overall, seniors' housing market conditions remained relatively stable in the Trois-Rivières CMA. The share of unoccupied standard spaces reached 13.2 per cent in 2015, compared to 13.6 per cent last year. That said, Trois-Rivières continued to post the most relaxed market conditions among the province's six CMAs. This slight market tightening hid two distinct cases: a drop in apartment vacancy rates (especially for two-bedroom apartments) and a rise in the case of private rooms. With the exception of Cap-de-la-Madeleine, all of the central sectors posted declines in vacancy rates. As for the average monthly rent for standard spaces, it was estimated at $1,548 according to the 2015 survey. From a geographical standpoint, the rent averaged at $1,568 in Trois-Rivières Centre, whereas the average was $1,474 in the outlying sector. In fact, the Trois-Rivières CMA posted the highest capture rate among the province's CMAs: it was estimated at 27.8 per cent in 2015.

METHODOLOGY

Starts & Completions Survey Methodology

The Starts and Completions Survey is conducted by way of site visits which are used to confirm that new units have reached set stages in the construction process. Since most municipalities in the country issue building permits, these are used as an indication of where construction is likely to take place. In areas where there are no permits, reliance has to be placed either on local sources or searching procedures.

The Starts and Completions Survey is carried out monthly in urban areas with population in excess of 50,000, as defined by the 2011 Census. In urban areas with populations of 10,000 to 49,999, all Starts are enumerated in the last month of the quarter (i.e. four times a year, in March, June, September and December). In these centres with quarterly enumeration, Completion activity is modeled based on historical patterns. Monthly Starts and Completions activity in these quarterly locations are statistically estimated at a provincial level for single and multi categories. Centres with populations below 10,000 are enumerated on a sample basis, also in the last month of each quarter (i.e. four times a year, in March, June, September and December).

The Starts and Completions Survey enumerates dwelling units in new structures only, designed for non-transient and year-round occupancy.

Mobile homes are included in the surveys. A mobile home is a type of manufactured house that is completely assembled in a factory and then moved to a foundation before it is occupied.

Trailers or any other movable dwelling (the larger often referred to as a mobile home) with no permanent foundation are excluded from the survey.

Conversions and/or alterations within an existing structure are excluded from the surveys as are seasonal dwellings, such as: summer cottages, hunting and ski cabins, trailers and boat houses; and hostel accommodations, such as: hospitals, nursing homes, penal institutions, convents, monasteries, military and industrial camps, and collective types of accommodation such as: hotels, clubs, and lodging homes.

Market Absorption Survey Methodology

The Market Absorption Survey is carried out in conjunction with the Starts and Completions Survey in urban areas with populations in excess of 50,000. When a structure is recorded as completed, an update is also made as units are sold or rented. The dwellings are then enumerated each month until such time as full absorption occurs.

STARTS AND COMPLETIONS SURVEY AND MARKET ABSORPTION SURVEY DEFINITIONS

A "**dwelling unit**", for purposes of the Starts and Completions Survey, is defined as a structurally separate set of self-contained living premises with a private entrance from outside the building or from a common hall, lobby, or stairway inside the building. Such an entrance must be one that can be used without passing through another separate dwelling unit.

A "**start**", for purposes of the Starts and Completions Survey, is defined as the beginning of construction work on a building, usually when the concrete has been poured for the whole of the footing around the structure, or an equivalent stage where a basement will not be part of the structure.

The number of units "**under construction**" as at the end of the period shown, takes into account certain adjustments which are necessary for various reasons. For example, after a start on a dwelling has commenced construction may cease, or a structure, when completed, may contain more or fewer dwelling units than were reported at start.

A "**completion**", for purposes of the Starts and Completions Survey, is defined as the stage at which all the proposed construction work on a dwelling unit has been performed, although under some circumstances a dwelling may be counted as completed where up to 10 per cent of the proposed work remains to be done.

The term "**absorbed**" means that a housing unit is no longer on the market (i.e. has been sold or rented). This usually happens when a binding contract is secured by a non-refundable deposit and has been signed by a qualified purchaser. The purpose of the Market Absorption Survey is to measure the rate at which units are sold or rented after they are completed, as well as collect prices.

DWELLING TYPES:

A "**Single-Detached**" dwelling (also referred to as "**Single**") is a building containing only one dwelling unit, which is completely separated on all sides from any other dwelling or structure. Includes link homes, where two units may share a common basement wall but are separated above grade. Also includes cluster-single developments.

A "**Semi-Detached (Double)**" dwelling (also referred to as "**Semi**") is one of two dwellings located side-by-side in a building, adjoining no other structure and separated by a common or party wall extending from ground to roof.

A "**Row (Townhouse)**" dwelling is a one family dwelling unit in a row of three or more attached dwellings separated by a common or party wall extending from ground to roof.

The term "**Apartment and other**" includes all dwellings other than those described above, including structures commonly known as stacked townhouses, duplexes, triplexes, double duplexes and row duplexes.

INTENDED MARKET:

The "**intended market**" is the tenure in which the unit is being marketed. This includes the following categories:

Freehold: A residence where the owner owns the dwelling and lot outright.

Condominium (including Strata-Titled): An individual dwelling which is privately owned, but where the building and/or the land are collectively owned by all dwelling unit owners. A condominium is a form of ownership rather than a type of house.

Rental: Dwelling constructed for rental purposes regardless of who finances the structure.

GEOGRAPHICAL TERMS:

A census metropolitan area (CMA) or a census agglomeration (CA) is formed by one or more adjacent municipalities centred on a large urban area (known as the urban core). The census population count of the urban core is at least 10,000 to form a census agglomeration and at least 100,000 to form a census metropolitan area. To be included in the CMA or CA, other adjacent municipalities must have a high degree on integration with the central urban area, as measured by commuting flows derived from census place of work data. CMAs and CAs contain whole municipalities or Census Subdivisions.

A "**Rural**" area, for the purposes of this publication, is a centre with a population less than 10,000.

All data presented in this publication is based on Statistics Canada's 2006 Census area definitions.

CMHC—HOME TO CANADIANS

Canada Mortgage and Housing Corporation (CMHC) has been Canada's national housing agency for more than 65 years.

Together with other housing stakeholders, we help ensure that the Canadian housing system remains one of the best in the world. We are committed to helping Canadians access a wide choice of quality, environmentally sustainable and affordable housing solutions that will continue to create vibrant and healthy communities and cities across the country.
